The POPULATION of the UNITED KINGDOM in the middle of 1898 is estimated at 40,188,927 persons; that of England and Wales at 31,397,078, that of Scotland at 4,249,946, and that of Ireland at 4,541,903.

In the United Kingdom 290,932 *births* and 195,852 *deaths* were registered in the three months ending 31st March 1898. The natural increase of population was, therefore, 95,080. The number of persons married in the quarter ending 31st December 1897 was 165,314.

The birth-rate in the United Kingdom in the *first* quarter of 1898 was 29·4, and the death-rate 19·8, per 1000. The marriage-rate in the *fourth* quarter of 1897 was 16·5 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

#### *Emigration.*

It appears from returns issued by the Board of Trade that 36,323 emigrants embarked during last quarter, from the various ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 819 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 24,558, of whom 17,584 were English, 3055 Scotch, and 3919 Irish, whilst 11,765 others were of foreign origin. The proportions of emigrants belonging to the several portions of the United Kingdom, per million of the respective estimated populations, were 560 belonging to England, 719 belonging to Scotland, and 863 belonging to Ireland. Compared with the averages in the three preceding first quarters, the proportion of English emigrants showed a decrease of 8·8 per cent., that of Scotch emigrants an increase of 27·3 per cent., and that of Irish emigrants a decrease of 19·3 per cent.

## ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2083 registration sub-districts of England and Wales during the quarter ending 31st March 1898; and the MARRIAGES in 15,262 churches or chapels, in 11,998 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, during the three months ending 31st December 1897.

### *Marriages.*

The marriage-rate in the last quarter of 1897 had only been exceeded twice during the last ten years, namely in the fourth quarters of 1890 and 1891. The marriage-rate in the year 1897 was 16·0 per 1000, which is the highest rate in any year since 1876, and 0·9 per 1000 above the mean rate in the ten years 1887–96.

### *Meteorology.*

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 72–80.

The mean reading of the barometer was 29·875 inches, being ·100 inch above the average reading in the first quarters of 57 years; the mean reading was ·384 inch above the average in January, ·041 inch below in February, and ·042 inch below in March. The mean temperature of the air was 41°·5, or 2°·6 above the average in the first quarters of 127 years; it was 6°·9 above the average in January, and 2°·4 above in February, but was 1°·4 below the average in March.

In January the weather was generally dry, mild, and dull; in February it was still mild and dull, but with frequent rain; in March, with the exception of a few warm days in the middle of the month it was cold. March was the coldest and January was the warmest month in the quarter, the mean temperature in January having been 2°·4 higher than that in February, and 3°·8 higher than that in March. At 27 other stations of observation the mean temperature of the air during the quarter ranged from 38°·7 at Llangammarch Wells, 39°·3 at Wolverhampton, and 39°·5 at Halifax, to 43°·7 at Ventnor and at Llandudno, 44°·9 at Truro, and 45°·1 in Guernsey.

The amount of rain measured during the quarter at the Royal Observatory was 3·24 ins., which is 1·71 ins. below the average in the first quarters of 83 years. The amount was 1·20 ins. below the average in January, 0·35 in. below in February, and 0·16 in. below in March. At 27 other stations of observation the rainfall during the quarter ranged from 2·48 ins. at Oxford, 2·53 ins. at Hereford, and 2·66 ins. at Coventry, to 6·28 ins. at Halifax, 8·02 ins. at Llangammarch Wells, and 14·31 ins. at Stonyhurst.

The duration of bright sunshine recorded at the Royal Observatory was 156·9 hours, being 17·3 per cent. of the total hours during which the sun was above the horizon, against a mean proportion of 18·5 per cent. in the twenty preceding first quarters. The duration of bright sunshine was 9·9 per cent. below the average in January, and 18·2 per cent. in March, while in February it was 21·1 per cent. above the average.

### *Deaths.*

The deaths registered last quarter numbered 151,014, and were in the proportion of 19·5 annually per 1000 persons living, the average rate in the ten preceding first quarters having been 21·1. The urban and the rural rates were 1·8 and 1·3 per 1000 below their respective averages in the ten preceding first quarters. Out of equal numbers living the deaths last quarter in the urban areas were to those in the rural areas as 104 is to 100, the mean proportion in the ten preceding first quarters having been as 107 to 100.

In the Thirty-three great towns, of which the aggregate population in the middle of 1898 is estimated at nearly eleven and a quarter millions, the death-rate was 20·6 per 1000 living, or 1·1 in excess of the death-rate in the whole country. *Small-pox*, to which only 9 deaths had been referred in the nine months ending with December, 1897, and only 39 deaths in the nine months immediately preceding, was the registered cause of 176 deaths last quarter. The whole of this mortality occurred in the northern part of the country; and, with the exception of 5 isolated cases, all the deaths took place in Middlesbrough and in three neighbouring registration districts. In the district of Middlesbrough itself, 165 deaths occurred, no less than 153 of the deceased belonging to the municipal borough of that name. The mortality from small-pox alone in the last mentioned area was equal to an annual rate of 6·61 per 1000 of the estimated population.

In the thirty-three great towns the mean proportion of uncertified deaths was 1·3 per cent.; but while no uncertified death was registered in Croydon, in Derby, in Bolton, or in Oldham, the proportions rose to 3·4 in Blackburn, 3·7 in West Ham and in Birmingham, and 3·8 in Liverpool and in Preston.

**INQUESTS.**—Inquests were held in England and Wales concerning 9030, or 6·0 per cent., of the total deaths, the mean proportion in the ten preceding first quarters having been 5·7 per cent. In the thirty-three great towns the proportion of inquest cases was 7·5 per cent., ranging from 2·3 in Preston, 3·9 in Halifax, 4·3 in Portsmouth, and 4·4 in Birmingham and in Sheffield, to 9·0 in Derby and in Leeds, 9·6 in Newcastle-upon-Tyne, and 10·5 in Croydon.

**DEATHS IN PUBLIC INSTITUTIONS.**—The total deaths registered in England and Wales include 20,521, or 13·6 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in these classes of institutions in the ten preceding first quarters having been 12·3 per cent. In the thirty-three great towns the deaths in public institutions formed 20·9 per cent. of the total deaths, the percentages in the several towns ranging from 7·6 in Gateshead, 9·3 in Swansea, 9·6 in Burnley, and 9·9 in Huddersfield, to 19·1 in Newcastle-upon-Tyne, 22·9 in Manchester, 24·5 in Liverpool, and 27·8 in London.

**LONDON.**—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London occurring in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within registration London. The deaths thus computed were equal to an annual rate of 21·7 per 1000 from all causes and of 2·92 from the principal zymotic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London are excluded, these rates are reduced to 21·3 and 2·90 per 1000 respectively. Table VIII. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many districts of London is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown.

**EDINBURGH, GLASGOW, AND DUBLIN.**—The annual death-rate per 1000 living last quarter was 20·3 in Edinburgh, 22·7 in Glasgow, and 32·4 in Dublin, against 21·7 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-six of the Colonial and Foreign cities, with an aggregate population estimated at about twenty and a quarter millions, corresponded to an annual rate of 25·6 per 1000 persons living.

In twenty-three European and American cities the mean rate was 20·9 per 1000, against 20·6 in the thirty-three great English towns. In Paris the rate was 22·4, in Berlin it was 16·8, in Vienna it was 21·5, and in New York it was 17·7, against 21·7 in London. Among the rest of these cities the death-rates ranged from 15·6 in Hamburg, 16·0 in Amsterdam, and 17·1 in Copenhagen, to 24·2 in Breslau, 27·1 in Moscow, 27·6 in Venice, 33·3 in Trieste, and 33·8 in St. Petersburg. In the Indian cities the rates were 30·1 in Calcutta, 38·0 in Madras, and 119·5 in Bombay. The exceptionally high rate in Bombay was due to the epidemic of *bubonic fever*, to which 12,668 deaths were referred, equal to an annual rate of 61·8 per 1,000. *Small-pox* caused 55 deaths in Madras, 37 in St. Petersburg, 22 in Bombay, 21 in Moscow, and 16 in Calcutta. In proportion to population, *measles* was most fatal in Bombay, Madras, St. Petersburg, Moscow, Vienna, Prague, and Rome; *scarlet fever* in St. Petersburg, Moscow, and Prague; *diphtheria* in Stockholm, St. Petersburg, Moscow, Munich, Vienna, New York, and Philadelphia; "*fever*" in the Indian cities, in St. Petersburg, and in Philadelphia; and *diarrhæal diseases* in the Indian cities, and in St. Petersburg, Moscow, Breslau, and Munich.

<sup>a</sup> The Registration or Union Counties consist of groups of Registration Districts, which are generally co-extensive in that Registration County in which the principal town of the district, or the greater part of the population, is in that Geographical County.

<sup>b</sup> These areas, revised by the Ordnance Survey Department, are derived from those published in the Census changes in the boundaries of districts and sub-districts have taken place since the Census of 1891; in the majority of cases the boundaries are the same as in 1891.

<sup>c</sup> The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

<sup>d</sup> The population of the Registration County of London at the Census taken on 29th March 1896 was 4,411,710.

North and North-easterly gales were experienced on the 24th, 25th and 26th; the gale on the 24th being accompanied by a heavy snowstorm. At Bristol, the gale was accompanied by thunder and lightning, the fall of snow was heavy, causing telegraph wires and poles to break down. The Great Northern Railway line from Luton to Dunstable was blocked for several hours near Dunstable Downs. The effects of the three days' gale was most severely felt on the south and east coast, the mail steamers from Dover to Calais were unable to cross on the 25th, and the service between Folkestone and Boulogne was also suspended; considerable damage was done at Sheerness and Lowestoft, the denes at the north of Lowestoft town were flooded, the water being many feet deep in places; the beach, from the pier to the esplanade, has been lowered from five to six feet, in some parts the public walks have quite disappeared, the sea having undermined the cliffs, the summits have collapsed; at one point a portion of the cliffs fell, carrying with it in its fall part of a large field. Extensive damage was done both on land and sea, and many lives were lost.

The proportions of emigrants belonging to the several portions of the United Kingdom, per million of the respective estimated populations, were 684 belonging to England, 832 belonging to Scotland, and 3055 belonging to Ireland. Compared with the averages in the three preceding second quarters, the proportion of English emigrants showed a decrease of 17·0 per cent., that of Scotch emigrants a decrease of 16·5 per cent., and that of Irish emigrants a decrease of 32·8 per cent.

### *Meteorology.*

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 72–80.

The mean reading of the barometer was 29·740 inches, being ·045 inch below the average reading in the second quarters of 57 years; the mean reading was ·007 inch below its average in April, ·127 inch below in May, and was equal to its average in June. The mean temperature of the air was  $52^{\circ}\cdot4$ , which is identical with the average in the second quarters of 127 years; it was  $1^{\circ}\cdot8$  above the average in April,  $0^{\circ}\cdot9$  below in May, and  $0^{\circ}\cdot8$  below in June.

In April the weather was generally dull, but there was little rain; in May it was dull and cold with frequent rain; and in June it was dull and cool with very little sunshine. At 27 other stations of observation the mean temperature of the air during the quarter ranged from  $47^{\circ}\cdot7$  at Halifax,  $49^{\circ}\cdot0$  at Llangammarch Wells, and  $49^{\circ}\cdot1$  at Wolverhampton, to  $52^{\circ}\cdot1$  at Oxford,  $52^{\circ}\cdot4$  in Guernsey, and  $52^{\circ}\cdot6$  at Camden Square (London).

The amount of rain measured during the quarter at the Royal Observatory was 5·32 inches, which is 0·29 inch below the average in the second quarters of 83 years. The amount was 0·75 inch below the average in April, 0·65 inch above in May, and 0·19 inch below in June. At 27 other stations of observation the rainfall during the quarter ranged from 4·39 inches at Camden Square (London), 5·06 inches at Croydon, and 5·15 inches at Barnet, to 8·75 inches at Liverpool, 9·10 inches at Llangammarch Wells, and 9·29 inches at Llandudno.

The duration of bright sunshine recorded at the Royal Observatory was 453·5 hours, being 32·6 per cent. of the total hours during which the sun was above the horizon, against a mean proportion of 34·7 per cent. in the twenty-one preceding second quarters. The duration of bright sunshine was 19·2 per cent. above the average in April, but was 20·8 per cent. below the average in May, and 9·0 per cent. below in June.

### *Deaths.*

The deaths registered last quarter numbered 127,033, and were in the proportion of 16·2 annually per 1000 persons living, the average rate in the ten preceding second quarters having been 17·9. In registration counties the death-rates ranged from 11·4 in Middlesex, 12·1 in Surrey, 12·5 in Sussex, and 12·9 in Huntingdonshire, to 18·5 in Durham, 18·8 in Staffordshire, 18·9 in Rutlandshire, 20·1 in Northumberland, and 20·8 in North Wales.

The 127,033 deaths registered in England and Wales include 65,961 of males and 61,072 of females, the death-rate among males being 17·4, and that among females 15·1, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding second quarters the death-rate of males showed a decrease of 1·8, and that of females a decrease

of 1·5, per 1000 living. Out of equal numbers living, the deaths of males to those of females were as 115 is to 100, against a mean proportion of 116 to 100 in the second quarters of the ten preceding years.

**URBAN AND RURAL MORTALITY.**—In those parts of England and Wales that are mainly urban\* in character, with a population estimated at nearly twenty-one and a half millions in the middle of 1898, the death-rate last quarter was 16·6 per 1000 living; whilst in the remaining and chiefly rural areas, with a population of nearly ten millions, the rate was 15·4 per 1000. The urban and the rural rates were 1·9 and 1·3 per 1000 below their respective averages in the ten preceding second quarters. Out of equal numbers living the deaths last quarter in the urban areas were to those in the rural areas as 108 is to 100, the mean proportion in the ten preceding second quarters having been as 111 to 100.

In the thirty-three great towns, of which the aggregate population in the middle of 1898 is estimated at nearly eleven and a quarter millions, the death-rate was 17·1 per 1000 living, or 0·9 in excess of the death-rate in the whole country. The rates in the several towns ranged from 11·7 in Croydon, 12·1 in West Ham, 12·6 in Cardiff, and 12·7 in Brighton, to 20·0 in Manchester, 20·1 in Gateshead, 22·2 in Sunderland, 22·6 in Newcastle-on-Tyne, and 23·0 in Liverpool.

In the sixty-seven other large towns, with an aggregate population estimated at nearly four millions, the death-rate was 15·5 per 1000 living, or 1·6 per 1000 below the rate in the great towns; whilst in the remainder of England and Wales, excluding these 100 towns, it was 15·8.

**MORTALITY AT DIFFERENT AGES.**—Of the 127,033 deaths registered last quarter, 28,500 were those of infants under one year of age, 60,487 those of persons aged between one year and sixty years, and 38,046 those of persons aged sixty years and upwards.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 123 per 1000, which is 5 per 1000 below the average in the ten preceding second quarters. In registration counties the lowest proportions per 1000 births were 71 in Hertfordshire, 77 in Huntingdonshire and in Dorsetshire, and 81 in Shropshire; the highest proportions were 139 in the West Riding of Yorkshire, 142 in Staffordshire, 143 in Rutlandshire, 147 in Durham, and 149 in Northumberland.

In the thirty-three great towns as a whole, infant mortality was equal to 133 per 1000 births, being higher than the proportion in England and Wales by 10 per 1000; among the several towns the lowest proportions were 88 per 1000 births in Cardiff, 91 in Croydon, 94 in Huddersfield, and 97 in Portsmouth; the highest were 158 in Halifax and in Bradford, 163 in Gateshead, 169 in Sunderland, and 174 in Newcastle-on-Tyne. Among the sixty-seven other large towns infant mortality averaged 129 per 1000 births, ranging from 49 in Hornsey, 72 in Colchester, 77 in Worcester, and 78 in Rochdale, to 174 in Great Yarmouth, 177 in Darwen, 197 in Accrington, 207 in Barnsley, 216 in Longton, and 219 in Dudley. Excluding these 100 towns, infant mortality in the remainder of England and Wales was in the proportion of 114 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·6 per 1000 of the estimated population at this group of ages, being 1·2 below the mean rate in the ten preceding second quarters. In the thirty-three great towns the mean rate of mortality at this age-group was 9·8 per 1000 living, ranging from 5·7 in Croydon, 6·4 in Brighton, 6·9 in West Ham and 7·4 in Portsmouth, to 11·8 in Manchester,

11.9 in Salford, 12.8 in Sunderland and in Newcastle-on-Tyne, and 14.2 in Liverpool. In the sixty-seven other large towns the rate averaged 8.5 per 1000, and in the remainder of England and Wales, after excluding these 100 towns, it was 7.7 per 1000.

Among persons aged sixty years and upwards the mortality in England and Wales was at the annual rate of 65.7 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding second quarters having been 69.3. In the thirty-three great towns the rate was 68.0 per 1000, ranging from 47.4 in Brighton, 50.3 in West Ham, 54.8 in Portsmouth, and 58.1 in Bristol, to 92.5 in Huddersfield, 95.6 in Oldham, 95.7 in Liverpool, and 101.3 in Newcastle-on-Tyne. In the sixty-seven other large towns the rate at this age-group averaged 62.9 per 1000, and in the remainder of the country it was 65.1 per 1000.

Compared with the mean rates in the ten preceding second quarters the mortality of infants under one year of age in England and Wales showed a decrease of 3.9 per cent., that of persons between one year and sixty years of age a decrease of 12.2 per cent., and that of persons aged sixty years and upwards a decrease of 5.2 per cent.

**ZYMOTIC DISEASES.**—The 127,033 deaths from all causes, which were registered last quarter, include—

4,281	that were attributed to measles,	
2,801	"	whooping-cough,
1,505	"	diphtheria,
1,277	"	diarrhœa,
816	"	" fever,"
788	"	scarlet fever,
and 66	"	small-pox.

Thus, to the above-mentioned zymotic diseases in the aggregate, 11,534 deaths were referred, being in the proportion of 1.47 annually per 1000 of the population, which is 0.20 below the mean proportion in the second quarters of the preceding ten years. In proportion to population, the mortality from measles was above, and that from diphtheria was equal to, while that from the five other diseases was below, the decennial average. In the thirty-three great towns the aggregate mortality from the above-named zymotic diseases was equal to an annual rate of 1.88 per 1000 of the population, and in the sixty-seven other large towns to a rate of 1.55 per 1000. In the remainder of England and Wales, outside the 100 chief towns, the rate was 1.17 per 1000.

The deaths from *measles* numbered 4281, and corresponded to an annual rate of 0.55 per 1000 of the population, or 0.07 above the decennial average rate for the second quarter of the year. No death was referred to measles last quarter in Dorsetshire, and the rate was below 0.10 in Oxfordshire and in Lincolnshire; but it ranged upwards in the other counties to 0.91 in Cambridgeshire, 0.96 in London, 1.51 in Leicestershire, 1.66 in Cumberland, and 1.69 in Staffordshire. In the thirty-three great towns the measles rate averaged 0.69 per 1000; no death was attributed to this disease in Preston, and only one in Portsmouth; among the other great towns the highest rates were 1.04 in Bristol and in Newcastle-on-Tyne, 1.38 in Leicester, and 1.58 in Halifax. In the sixty-seven other large towns the rate averaged 0.58 per 1000, and among these the highest death-rates from measles were recorded in Cambridge, Devonport, Hanley, Burton-on-Trent, Dudley, Wigan, Accrington, Darwen, Darlington, Carlisle, and Newport (Monmouthshire). In the remainder of England and Wales the measles death-rate was equal to 0.44 per 1000. Among registration districts and sub-districts outside the 100 chief towns in which measles was especially fatal were Andover, West Alvington, Tunstall, Biddulph, Gresley, Stourbridge, Hinckley, Whitwick, Melbourne, Workington, and Loughor.

*Whooping-cough* was the registered cause of death in 2801 cases, corresponding to a death-rate of 0·36 annually per 1000 of the population, or 0·09 less than the average in the second quarters of the preceding ten years. No death was referred to whooping-cough last quarter, either in Huntingdonshire or in Cumberland; but the death-rate reached 0·60 in London and in Northumberland, 0·67 in Suffolk, 0·69 in Cornwall, and 0·79 in Cambridgeshire. In the thirty-three great towns the rate averaged 0·52 per 1000. No death from whooping-cough was registered in Blackburn, and only one each in Wolverhampton, Birkenhead, and Huddersfield; the highest rates were 0·90 in Sheffield, 0·93 in Gateshead, 0·97 in Salford, and 1·15 in Newcastle-on-Tyne. In the sixty-seven other large towns whooping-cough mortality averaged 0·30 per 1000. Among these towns the disease was especially fatal in Cambridge, West Bromwich, Wallasey, Wigan, Barnsley, South Shields, Jarrow, and Aberdare. In the remainder of England and Wales the rate was 0·26 per 1000. Among registration districts and sub-districts outside the 100 chief towns whooping-cough showed excessive fatality in Winslow, Fulbourn, Ely, East Ham, Hadleigh, Lowestoft, Fincham, Harberton, Illogan, and Camborne.

*Diphtheria* was the registered cause of death in 1505 instances during the quarter, and accounted for a mortality equal to 0·19 per 1000 living, which is equal to the average rate in the ten preceding June quarters. Among registration counties the death-rate from this disease ranged from 0·04 in Cumberland, 0·05 in the North Riding of Yorkshire, and 0·06 in Cornwall, in Somersetshire, and in Westmorland, to 0·36 in Cambridgeshire, 0·37 in Kent, 0·38 in Monmouthshire, and 0·40 in South Wales. In the thirty-three great towns the diphtheria rate averaged 0·24 per 1000. No death from the disease was registered in Halifax, and only one each in Oldham, Preston, and Sunderland; in the other towns the rates ranged upwards to 0·33 in London, 0·35 in Birkenhead, 0·45 in West Ham, 0·48 in Burnley, and 0·83 in Cardiff. In the sixty-seven other large towns the mortality from diphtheria averaged 0·21 per 1000, and among these showed the greatest excess in Willesden, Tottenham, Walthamstow, Great Yarmouth, Longton, Keighley, Newport (Monmouthshire), and Aberdare. In the remainder of England and Wales the rate was 0·15 per 1000. Among registration districts and sub-districts outside the chief towns diphtheria was especially fatal in Bexley, Tunbridge Wells, Midhurst, Burnham, Wisbech, Fenton, Runcorn, Horsforth, Nantmel, and Ysptyty.

In the course of last quarter *diarrhœa* caused 1,277 deaths, which are equal to an annual rate of 0·16 per 1000, or 0·09 below the average rate of mortality in the second quarters of the previous ten years. The death-rate from this disease did not exceed 0·05 either in Huntingdonshire, in Bedfordshire, or in Cornwall; but it reached 0·25 in Lancashire, 0·26 in Cumberland, 0·30 in Staffordshire, and 0·31 in Warwickshire. Among the thirty-three great towns the diarrhœa rate averaged 0·19 per 1000, the highest rates being 0·33 in Manchester, 0·36 in Wolverhampton, and 0·41 in Preston. In the sixty-seven other large towns the rate averaged 0·18 per 1000, and among these diarrhœa was most fatal in Longton, Dudley, Coventry, Barnsley, and Rotherham. In the rest of England and Wales the diarrhœa death-rate was equal to 0·14 per 1000.

To "*fever*" 816 deaths were referred last quarter, giving an annual death-rate of 0·10 per 1000, which is 0·03 below the average rate for the corresponding quarters in the preceding ten years. No death from "*fever*" was registered in Huntingdonshire, in Herefordshire, or in Rutlandshire, and only one each in Hertfordshire, in Buckinghamshire, and in Suffolk; the highest rates were 0·19 in Lancashire and in Durham, 0·20 in Norfolk, and 0·25 in Staffordshire. In the thirty-three great towns the rate averaged 0·11 per 1000. No death from this disease was registered in Brighton or in

Plymouth, and only one each in Croydon and in Huddersfield; the highest rates were 0·22 in Norwich and in Manchester, 0·25 in Sunderland, and 0·27 in Wolverhampton and in Liverpool. In the sixty-seven other large towns the rate averaged 0·13 per 1000, and among these towns the disease showed the highest proportional fatality in Great Yarmouth, Exeter, Longton, Walsall, Dudley, Wallasey, Bootle, and South Shields. In the remainder of England and Wales the rate was 0·10 per 1000. Among registration districts and sub-districts outside the chief towns the mortality from "fever" was excessive in Leighton Buzzard, King's Lynn, Fenton, Rowley Regis, Sutton-in-Ashfield, Crompton, Lancaster, and Tanfield.

To scarlet fever 788 deaths were ascribed last quarter, corresponding to an annual rate of mortality of 0·10 per 1000, or 0·06 below the average rate in the second quarters of the preceding ten years. No death from scarlet fever was recorded in Buckinghamshire, in Huntingdonshire, in Bedfordshire, in Cambridgeshire, in Herefordshire, or in Rutlandshire; the highest rates were 0·14 in Staffordshire and in Northumberland, 0·17 in the West Riding, 0·19 in the East Riding, and 0·20 in Derbyshire. In the thirty-three great towns the scarlet fever rate averaged 0·13 per 1000. No death from scarlet fever was registered in Brighton, in Plymouth, in Burnley, or in Preston; the highest rates were 0·23 in Wolverhampton and in Gateshead, 0·25 in Halifax, and 0·32 in Leeds. In the sixty-seven other large towns the rate averaged 0·10 per 1000, and among these was excessive in Dudley, Worcester, Wallasey, Wigan, Accrington, Barrow-in-Furness, Wakefield, and Middlesbrough. In the remainder of England and Wales the rate was 0·08 per 1000. Among registration districts and sub-districts outside the chief towns scarlet fever showed excessive fatality in Bocking, Burslem, Glossop, Ashton-in-Makerfield, Padiham, Sowerby, and Batley.

*Small-pox* was the registered cause of 66 deaths last quarter, against 176 in the previous quarter. Of the 66 deaths, 45 occurred in Middlesbrough, and 10 in a group of five registration districts (Sunderland, South Shields, Gateshead, Newcastle, and Castle Ward) situated near the mouth of the Tyne. Only 6 deaths from this disease occurred in the southern part of the country, and 4 of these were of persons who had been removed from a steamship to the Floating Hospital at Southampton.

WATERING-PLACES AND SUMMER RESORTS.—The deaths registered last quarter from all causes, and from each of the more important zymotic diseases, in those urban districts which are most nearly co-terminous with our chief watering-places, are shown in Table VIII. For purposes of comparison the populations at the census of 1891 are also given.

**VIOLENT DEATHS.**—The deaths in England and Wales that were referred to different forms of violence, whether accidental or otherwise, numbered 4593 last quarter, and were equal to an annual rate of 0·59 per 1000 of the population, or 0·03 below the average rate in the ten preceding second quarters. The rates in the several counties last quarter ranged from 0·30 in Cambridgeshire, 0·31 in Dorsetshire, 0·33 in Huntingdonshire, and 0·35 in Middlesex and in Oxfordshire, to 0·70 in the East Riding of Yorkshire, 0·71 in Warwickshire, 0·75 in Hertfordshire, and 0·77 in Northumberland. In the thirty-three great towns the mean rate was 0·70 per 1000 living, the rates in the several towns ranging from 0·28 in Plymouth, 0·41 in Oldham, 0·42 in Leicester, and 0·43 in Birkenhead, to 0·81 in Blackburn and in Sunderland, 0·82 in Hull, 0·99 in Liverpool, and 1·01 in Newcastle-upon-Tyne.

**CERTIFICATION OF CAUSES OF DEATH.**—Of the 127,033 deaths registered in England and Wales last quarter, the causes of 116,570, or 91·7 per cent., were certified by registered medical practitioners, and the causes of 8094, or 6·4 per cent., by coroners after inquest; whilst the causes of the remaining 2369, or 1·9 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding second quarters having been 2·5 per cent. In registration counties the proportions of uncertified deaths ranged from 0·6 in Somersetshire, 0·8 in London, and 0·9 in Monmouthshire, to 3·3 in Kent and in Derbyshire, 4·3 in Leicestershire and in North Wales, and 4·5 in Herefordshire. In the thirty three great towns the mean proportion of uncertified deaths was 1·3 per cent.; but while no uncertified death was registered in Croydon or in Derby, the proportions rose to 3·0 in Huddersfield, 3·4 in Liverpool, 3·6 in Leicester, and 3·7 in Halifax.

**INQUESTS.**—Inquests were held in England and Wales concerning 8094, or 6·4 per cent., of the total deaths, the mean proportion in the ten preceding second quarters having been 5·9 per cent. In the thirty-three great towns the proportion of inquest cases was 7·8 per cent., ranging from 4·7 in Huddersfield, 5·0 in Cardiff and in Norwich, 5·1 in Sheffield, and 5·2 in Oldham and in Preston, to 8·8 in Leeds and in Hull, 9·1 in Croydon and in Birkenhead, and 9·4 in London.

**DEATHS IN PUBLIC INSTITUTIONS.**—The total deaths registered in England and Wales include 18,283, or 14·4 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in these classes of institutions in the ten preceding second quarters having been 12·6 per cent. In the thirty-three great towns the deaths in public institutions formed 22·5 per cent. of the total deaths, the percentages in the several towns ranging from 6·5 in Gateshead, 8·0 in Swansea, 8·5 in Burnley, and 11·4 in Oldham, to 20·0 in Birmingham, 22·6 in Manchester, 25·3 in Liverpool, and 31·2 in London.

---

**LONDON.**—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within registration London. The deaths thus computed were equal to an annual rate of 16·4 per 1000 from all causes and of 2·26 from the principal zymotic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London are excluded, these rates are reduced to 16·0 and 2·24 per 1000 respectively. Table IX. shows the death-rate of London after this correction has been

applied; and, since the registered mortality in many districts of London is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 19·7 in Edinburgh, 22·6 in Glasgow, and 23·5 in Dublin, against 16·4 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-six of the Colonial and Foreign cities, with an aggregate population estimated at about twenty and a quarter millions, corresponded to an annual rate of 22·3 per 1000 persons living.

In twenty-one European and American cities the mean rate was 21·8 per 1000, against 17·1 in the thirty-three great English towns. In Paris the rate was 19·8, in Berlin it was 16·4, in Vienna it was 23·1, and in New York it was 17·9, against 16·4 in London. Among the rest of these cities the death-rates ranged from 14·8 in the Hague, 15·4 in Rome, 16·4 in Amsterdam, and 17·4 in Brussels, to 25·9 in Prague, 26·9 in Breslau, 31·9 in Moscow, and 32·4 in St. Petersburg. In the Indian Cities the rates were 28·8 in Calcutta, 38·7 in Madras, and 44·8 in Bombay. *Smallpox* caused 17 deaths in Bombay, 28 in Moscow, 29 in St. Petersburg, 31 in Calcutta, and 36 in Madras. In proportion to population, *measles* was most fatal in Madras, Paris, Rotterdam, Hamburg, Breslau, Vienna, and Prague; *scarlet fever* in St. Petersburg, Moscow, and Prague; *diphtheria* in Stockholm, St. Petersburg, Moscow, Munich, Vienna, New York, and Philadelphia; *whooping-cough* in Copenhagen; “*fever*” in St. Petersburg, Moscow, Philadelphia, and in the three Indian cities; and *diarrhoeal diseases* in Brussels, St. Petersburg, Moscow, Breslau, Munich, Vienna, Trieste, and in the Indian cities.

The Registration Districts, 636 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties. The numerical arrangement 1a to 631 was adopted on 1st July 1891.

<sup>a</sup> See page 2, note <sup>b</sup>.

<sup>b</sup> For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" in the twelve subsequent headings in the Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 2nd July 1898.

The POPULATION of the UNITED KINGDOM in the middle of 1898 is estimated at 40,188,927 persons; that of England and Wales at 31,397,078, that of Scotland at 4,249,946, and that of Ireland at 4,541,903.

In the United Kingdom 293,630 *births* and 177,307 *deaths* were registered in the three months ending 30th September 1898. The natural increase of population was, therefore, 116,323. The number of persons married in the quarter ending 30th June 1898 was 166,406.

The birth-rate in the United Kingdom in the *third* quarter of 1898 was 29.0, and the death-rate 17.5, per 1000. The marriage-rate in the *second* quarter of 1898 was 16.6 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

#### *Emigration.*

According to the returns issued by the Board of Trade, it appears that 66,898 emigrants embarked during last quarter, from the various ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1095 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 47,648, of whom 31,058 were English, 5652 Scotch, and 10,938 Irish, whilst 19,250 others were of foreign nationality. The proportions of emigrants belonging to the several portions of the United Kingdom, per million of the respective estimated populations, were 989 belonging to England, 1330 belonging to Scotland, and 2408 belonging to Ireland. Compared with the averages in the three preceding third quarters, the proportion of English emigrants showed a decrease of 17.5 per cent., that of Scotch emigrants a decrease of 22.4 per cent., and that of Irish emigrants a decrease of 15.8 per cent.

### *Meteorology.*

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 72–81.

The weather in July was for the most part dry and dull, with temperature below the average. In August it was fine and bright, with a remarkably hot period from the 11th to the 23rd; the variations of temperature during the month were very great, ranging from 10°·3 below the average on the 7th to 12°·0 above the average on the 15th. The weather in September was remarkable for its small rainfall, unusual amount of sunshine, and an exceedingly hot period from the 2nd to the 17th, the excess above the average reaching 17°·7 on the 8th, 16°·8 on the 9th, and 17°·5 on the 17th. The fall of rain at Greenwich in the 12 months ending with September was only 14·76 inches, which is less than the fall in any corresponding period as far back as the year 1815, and is less than three-fifths of the average fall during the ensuing 83 years.

The mean reading of the barometer was 29·903 inches, being ·111 of an inch above the average reading in the third quarters of 57 years; the mean reading was above the average in each month of the quarter, the excess being ·144 of an inch in July, ·065 of an inch in August, and ·123 of an inch in September. The mean temperature of the air was 62°·7, which is 3°·0 above the average in the third quarters of 127 years; it was 0°·2 below the average in July, but the excess reached 3°·7 in August and 5°·5 in September. At 25 other stations of observation the mean temperature of the air during the quarter ranged from 56°·7 at Llangammarch Wells and at Halifax, 57°·5 at Wolverhampton, and 57°·8 at Stonyhurst, to 61°·8 at Ventnor and at Oxford, 62°·1 at Osborne, 62°·3 in Guernsey, and 62°·6 at Camden Square.

The amount of rain measured during the quarter at the Royal Observatory was 2·51 inches, which is 4·77 inches below the average in the third quarters of 83 years. The deficiency was 1·21 inch in July, 1·52 inch in August, and 2·04 inches in September. At 26 other stations of observation the rainfall during the quarter ranged from 2·05 inches at Croydon, 2·11 inches at Barnet, 2·60 inches at Camden Square, 2·69 inches at Ventnor, and 2·74 inches at Oxford, to 5·60 inches at Wolverhampton, 6·83 inches at Llangammarch Wells, 7·31 inches at Llandudno, 7·74 inches at Carlisle, and 10·00 inches at Stonyhurst.

The duration of bright sunshine recorded at the Royal Observatory was 619·1 hours, being 46·8 per cent. of the time during which the sun was above the horizon, against a mean proportion of 33·0 per cent. in the twenty-one preceding third quarters. The duration of bright sunshine was 12·0 per cent. above the average in July, 42·7 per cent. above in August, and 82·5 per cent. above in September. In the last-named month the duration registered was 213·5 hours, which is 56·6 per cent. of the time during which the sun was above the horizon.

### *Deaths.*

The deaths registered last quarter numbered 141,540, and were in the proportion of 17·9 annually per 1000 persons living, the average rate

Compared with the averages in the ten preceding third quarters the death-rate of males showed an increase of 1·5, and that of females an increase of 1·2, per 1000 living. Out of equal numbers living, the deaths of males to those of females were as 116 is to 100, against a mean proportion of 115 to 100 in the third quarters of the ten preceding years.

**URBAN AND RURAL MORTALITY.**—In those parts of England and Wales that are mainly urban\* in character, with a population estimated at nearly twenty-one and a half millions in the middle of 1898, the death-rate last quarter was 19·3 per 1000 living; whilst in the remaining and chiefly rural areas, with a population of nearly ten millions, the rate was 14·9 per 1000. The urban and the rural rates were 1·5 and 0·7 per 1000 above their respective averages in the ten preceding third quarters. Out of equal numbers living the deaths last quarter in the urban areas were to those in the rural areas as 130 is to 100, the mean proportion in the ten preceding third quarters having been as 125 to 100.

In the thirty-three great towns, of which the aggregate population in the middle of 1898 is estimated at nearly eleven and a quarter millions, the death-rate was 20·3 per 1000 living, or 2·4 in excess of the death-rate in the whole country. The rates in the several towns ranged from 15·6 in Huddersfield, 15·9 in Cardiff, 16·0 in Swansea, and 16·1 in Oldham, to 25·1 in Wolverhampton, 26·3 in Liverpool, 27·5 in Sunderland, and 28·7 in Salford.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 225 per 1000, which is the highest proportion in any quarter for which the figures are available, and is 55 per 1000 above the average in the ten preceding third quarters. In registration counties the lowest proportions per 1000 births were 71 in Rutlandshire, 94 in Wiltshire, 98 in Westmorland, and 100 in Dorsetshire; the highest proportions were 256 in Northumberland, 261 in Middlesex, 264 in Lancashire, 266 in Warwickshire, 269 in the East Riding of Yorkshire, and 270 in Durham.

In the sixty-seven other large towns the rate at this age-group averaged 54·6 per 1000, and in the remainder of the country it was 52·0 per 1000.

Compared with the mean rates in the ten preceding third quarters the mortality of infants under one year of age in England and Wales showed an increase of 32·4 per cent., that of persons between one year and sixty years of age a decrease of 3·6 per cent., and that of persons aged sixty years and upwards an increase of 0·4 per cent.

ZYMOTIC DISEASES.—The 141,540 deaths from all causes, which were registered last quarter, include—

22,524	that were attributed to	diarrhœa,
2,248	”	whooping-cough,
1,927	”	measles,
1,556	”	diphtheria,
1,261	”	“fever,”

Thus, to the above-mentioned zymotic diseases in the aggregate, 30,218 deaths were referred, being in the proportion of 3·82 annually per 1000 of the population, which is 0·99 above the mean proportion in the third quarters of the preceding ten years. In proportion to population, the mortality from diarrhœa was above, while that from every one of the six other diseases was below, the decennial average. In the thirty-three great towns the aggregate mortality from the above-named zymotic diseases was equal to an annual rate of 4·94 per 1000 of the population, and in the sixty-seven other large towns to a rate of 4·35 per 1000. In the remainder of England and Wales, outside the 100 chief towns, the rate was 2·93 per 1000.

In the course of last quarter *diarrhœa* caused 22,524 deaths, which are equal to an annual rate of 2·85 per 1000, or 1·21 above the average rate of mortality in the third quarters of the previous ten years. The death-rate from this disease ranged from 0·37 in Rutlandshire, 0·58 in Herefordshire, 0·66 in Shropshire, and 0·68 in Dorsetshire, to 3·63 in Leicestershire, 3·70 in Staffordshire, 3·94 in Lancashire, 4·23 in the East Riding of Yorkshire, and 4·40 in Warwickshire. Among the thirty-three great towns the diarrhœa rate averaged 3·85 per 1000, the highest rates being 5·85 in Hull, 5·94 in Sunderland, 6·30 in Sheffield, 6·38 in Wolverhampton, 6·41 in Preston, and 6·47 in Salford. Among registration districts and sub-districts outside the 100 chief towns diarrhoea was especially fatal in Strood, Luton, East Ham, and Burslem. In accordance with precedent, special tables relating to the summer mortality from diarrhoea have been inserted in this Return (*see* Tables IX., X., XI.).

*Whooping-cough* was the registered cause of death in 2248 cases, corresponding to a death-rate of 0·28 annually per 1000 of the population, or 0·02 less than the average in the third quarters of the preceding ten years. No death was referred to whooping-cough last quarter in Herefordshire, and the death-rate was only 0·03 per 1000 in Wiltshire and in Cumberland; but it reached 0·41 in Suffolk, 0·49 in Northumberland, 0·56 in Durham, and 0·60 in Cornwall. In the thirty-three great towns the rate averaged 0·35 per 1000. No death from whooping-cough was registered in Burnley, and only one in Blackburn; the highest rates were 0·65 in Salford, 0·69 in Preston, 0·77 in Newcastle-on-Tyne, and 0·89 in Sunderland. *Diphtheria* was the registered cause of death in 1556 instances during the quarter, and accounted for a mortality equal to 0·20 per 1000 living, which is 0·01 below the average rate in the ten preceding third quarters. No death from diphtheria was registered in Westmorland; among the other registration counties the death-rate ranged from 0·02 in Oxfordshire, in the East Riding of Yorkshire, and in Durham, to 0·40 in Buckinghamshire, 0·42 in Kent, 0·44 in Essex, and 0·48 in South Wales. In the thirty-three great towns the diphtheria rate averaged 0·24 per 1000. No death from the disease was registered in Norwich, in Derby, or in Gateshead; in the other towns the rates ranged upwards to 0·43 in Birkenhead, 0·50 in West Ham, 0·57 in Leeds, and 1·26 in Swansea. No death from scarlet fever was recorded in Huntingdonshire, in Bedfordshire, in Rutlandshire, or in Westmorland; the highest rates were 0·14 in Durham, 0·15 in Derby, 0·16 in Staffordshire, and 0·19 in Northamptonshire. In the thirty-three great towns the scarlet fever rate averaged 0·11 per 1000. No death from scarlet fever was registered in Croydon or in Cardiff, and only one each in Preston and in Halifax; the highest rates were 0·24 in Leeds, 0·25 in Norwich and in Sunderland, and 0·32 in Salford. In the sixty-seven other large towns the rate averaged 0·07 per 1000, and among these was excessive in Northampton, Coventry, Macclesfield, Bootle, and Wigan. In the remainder of England and Wales the rate was 0·08 per 1000. Among registration districts and sub-districts outside the chief towns scarlet fever showed excessive fatality in Foleshill, Winterton, Barnoldswick, Harrington, and Llanllechid.

*Small-pox* was the registered cause of 8 deaths last quarter, against 66 in the previous quarter. Of the 8 deaths, 2 occurred in Lancashire, 2 in Northumberland, and 1 each in Shropshire, the North Riding of Yorkshire, Durham, and Cumberland.

**VIOLENT DEATHS.**—The deaths in England and Wales that were referred to different forms of violence, whether accidental or otherwise, numbered 4939 last quarter, and were equal to an annual rate of 0·62 per 1000 of the population, or 0·01 above the average rate in the ten preceding third quarters. The rates in the several counties last quarter ranged from 0·29 in Westmorland, 0·36 in Cornwall, 0·37 in Rutlandshire, and 0·39 in Oxfordshire and in Suffolk, to 0·75 in Essex and in Northumberland, and 0·77 in Derbyshire, in the North Riding of Yorkshire, and in Cumberland. In the thirty-three great towns the mean rate was 0·71 per 1000 living, the rates in the several towns ranging from 0·29 in Croydon, 0·32 in Norwich, 0·34 in Cardiff, and 0·36 in Plymouth, to 0·90 in Swansea, 0·92 in Sunderland, 0·97 in Newcastle-upon-Tyne, and 0·99 in West Ham and in Liverpool.

**CERTIFICATION OF CAUSES OF DEATH.**—Of the 141,540 deaths registered in England and Wales last quarter, the causes of 130,752, or 92·4 per cent., were certified by registered medical practitioners, and the causes of 8410, or 5·9 per cent., by coroners after inquest; whilst the causes of the remaining 2378, or 1·7 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding third quarters having been 2·4 per cent. No uncertified death was registered in Rutlandshire; in the other counties the proportions per cent. ranged from 0·5 in Monmouthshire, and 0·6 in Wiltshire and in the East Riding of Yorkshire, to 3·1 in Kent, 3·4 in Shropshire, 3·5 in Huntingdonshire and in Cambridgeshire, 3·7 in Bedfordshire, 4·4 in North Wales, and 5·4 in Herefordshire. In the thirty-three great towns the mean proportion of uncertified deaths was 1·0 per cent.; but while no uncertified death was registered in Croydon or in Derby, the proportion rose to 2·3 in Leicester and in Burnley, 2·5 in Birmingham and in Preston, 3·0 in Liverpool, and 4·2 in Blackburn.

**INQUESTS.**—Inquests were held in England and Wales concerning 8410, or 5·9 per cent., of the total deaths, the mean proportion in the ten preceding third quarters having been 6·0 per cent. In the thirty-three great towns the proportion of inquest cases was 6·7 per cent., ranging from 2·5 in Preston, 2·6 in Sheffield, 4·0 in Huddersfield, and 4·2 in Wolverhampton, to 8·1 in Bristol, 8·2 in London, 8·5 in Derby, and 10·2 in Bolton.

**DEATHS IN PUBLIC INSTITUTIONS.**—The total deaths registered in England and Wales include 17,025, or 12·0 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 11·7 per cent. In the thirty-three great towns the deaths in public institutions formed 18·2 per cent. of the total deaths, the percentages in the several towns ranging from 4·8 in Gateshead, 5·9 in Blackburn, 7·4 in Burnley, and 7·6 in Norwich, to 16·8 in Manchester, 17·7 in Derby, 19·3 in Brighton and in Liverpool, and 26·4 in London.

---

**LONDON.**—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within registration London. The deaths thus computed were equal to an annual rate of 19·4 per 1000 from all causes and to a rate of 4·31 from the principal zymotic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 18·9 and 4·29 per 1000 respectively. Table XII. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many districts of London

is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 18·7 in Edinburgh, 19·9 in Glasgow, and 24·3 in Dublin, against 19·4 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-seven of the Colonial and Foreign cities, with an aggregate population estimated at nearly twenty-one millions, corresponded to an annual rate of 22·8 per 1000 persons living.

In twenty-two European and American cities the mean rate was 20·9 per 1000, against 20·3 in the thirty-three great English towns. In Paris the rate was 18·9, in Berlin it was 19·6, in Vienna it was 18·5, and in New York it was 22·7, against 19·4 in London. Among the rest of these cities the death-rates ranged from 13·9 in Christiania, 15·6 in Rome, 16·1 in Stockholm, and 16·3 in Copenhagen, to 27·1 in Munich, 30·5 in Trieste, and 33·5 in Moscow. In the Indian cities the rates were 22·6 in Calcutta, 44·2 in Bombay, and 57·1 in Madras. *Small-pox* caused 13 deaths in St. Petersburg, 16 in Madras, and 25 in Moscow. In proportion to population, *measles* was most fatal in Madras, Amsterdam, Christiania, Moscow, and Hamburg; *scarlet fever* in St. Petersburg, Prague, Buda Pesth, and Trieste; *diphtheria* in Stockholm, St. Petersburg, Moscow, and Philadelphia; *whooping-cough* in Amsterdam, Copenhagen, Breslau, and Munich; "*fever*," in St. Petersburg, Moscow, Trieste, Rome, Venice, and in the three Indian cities; and *diarrhœal diseases* in St. Petersburg, Moscow, Berlin, Hamburg, Dresden, Breslau, Munich, Buda Pesth, Trieste, Venice, New York, and in the Indian cities.

The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of the Poor Law Unions. They do not include space occupied by foreshore or tidal water of rivers and creeks. Numerous of these cases the new areas have not yet been ascertained.

## METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING  
SEPTEMBER 30TH, 1898.

By JAMES GLAISHER, ESQ., F.R.S., &amp;c.

The weather in July was for the most part dry and dull, with little sunshine. The mean high day temperature of the air was  $1^{\circ}7$ , and the mean low night temperature  $0^{\circ}4$  below their averages. The mean daily temperature of the air was above its average from the 15th to the 18th, and from the 22nd to the 27th, and generally below on all other days. The atmospheric pressure was generally above its average throughout the month. The fall of rain was below its average at all stations. The N. and W. winds were very prevalent.

The weather in August was fine and bright, with a remarkably hot period extending from the 11th to the 23rd. The mean high day temperature was  $3^{\circ}1$ , and the mean low night temperature  $2^{\circ}2$  above their averages. The mean daily temperature of the air was generally below its average from the 7th to the 10th, and from the 23th to the 31st, being particularly so on the 7th and 8th, when it was as much as  $10^{\circ}3$  and  $9^{\circ}0$  respectively below; and generally above on all other days, being as much as  $11^{\circ}$ ,  $10^{\circ}2$ ,  $12^{\circ}0$ , and  $11^{\circ}0$  in excess on the 13th, 14th, 15th and 22nd respectively, and on several other days the temperature was as much as  $7^{\circ}$  and  $8^{\circ}$  in excess. The following Table shows the maximum temperatures from August 11th to the 23rd at our Weekly and Quarterly Stations:—

and the lowest were at Lowestoft and Llandudno,  $70^{\circ}3$ ; and at Halifax Public Library  $70^{\circ}9$ .

By selecting the three highest temperatures on every day from the preceding table, the next table is formed, showing the three highest maximum temperatures at the different stations on each day :—

August 11th	It was 80°·8 at Royal Observatory and Camden Square, 80°·0 at Barnet, and 79°·2 at Osborne.

The highest temperature on each day is shown in the first column, the highest in the table was 90°·0 on the 22nd at the Royal Observatory ; and the next in order, 88°·9, on the same day at Barnet.

The atmospheric pressure in August was below its average from the 6th to the 8th, and from the 27th to the 30th, and generally above on all other days. The fall of rain was small, and below its average at most stations. The fall for the month at Greenwich was 0·86 inch, and there were only seven instances of as small or smaller falls in the month of August, back to the year 1815, viz. :—

	in.		in.		in.
1884 ...	0·67	1861 ...	0·60	1819 ...	0·40

The weather in September was remarkable for its small rainfall, unusual amount of sunshine, and for the exceedingly hot period from the 2nd to the 17th. The mean high day temperature was 7°·2, and the mean low night temperature 2°·2, above their averages. The mean daily temperature of the air was below its average on the 1st, and from the 24th to the 30th, and generally above on all other days, being particularly so on the 4th, 7th, 8th, 9th, 16th and 17th, when it was as much as 10°·0, 11°·6, 17°·7, 16°·8, 12°·1, and 17°·5, respectively, in excess, and on several other days, between the 2nd and 23rd, the temperature was as much as 8° and 9° above its average.

The following table shows the maximum temperatures from September 2nd to the 17th at our Weekly and Quarterly Stations :—

The mean of the 16 high temperatures at the different stations are shown in the last column. The highest were at the Royal Observatory,  $81^{\circ}3$ ; at Barnet,  $81^{\circ}1$ ; and at Camden Square,  $80^{\circ}8$ ; and the lowest were at Halifax Public Library,  $69^{\circ}6$ ; at Liverpool,  $69^{\circ}9$ ; and at Lowestoft,  $70^{\circ}8$ .

By selecting the three highest temperatures on every day from the preceding table, the next table is formed, showing the three highest maximum temperatures at the different stations on each day.

The atmospheric pressure in September was generally below its average from the 7th to the 12th, and from the 27th to the 30th; and generally above on all other days. The fall of rain was remarkably small and greatly below its average at all stations. The fall for the month at Greenwich was  $0.31$  inch, and there was only one instance of as small or smaller fall for the month of September back to the year 1815, viz., in 1865, when the amount was  $0.20$  inch. #### UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1898 was estimated at 40,188,927 persons; that of England and Wales at 31,397,078, that of Scotland at 4,249,946, and that of Ireland at 4,541,903.

In the United Kingdom 280,104 *births* and 169,853 *deaths* were registered in the three months ending 31st December 1898. The natural increase of population was, therefore, 110,251. The number of persons married in the quarter ending 30th September 1898 was 158,896.

The birth-rate in the United Kingdom in the *fourth* quarter of 1898 was 27·7, and the death-rate 16·8, per 1000. The marriage-rate in the *third* quarter of 1898 was 15·7 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

#### *Emigration.*

According to the returns issued by the Board of Trade, it appears that 46,635 emigrants embarked during last quarter, from the various ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1477 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 32,849, of whom 23,153 were English, 3793 Scotch, and 5903 Irish, whilst 13,786 others were of foreign nationality. The proportions of emigrants accredited to the several portions of the United Kingdom, per million of the respective estimated populations, were as follow :—England, 737; Scotland, 892; and Ireland, 1300. Compared with the averages in the three preceding fourth quarters, the proportion of English emigrants showed a decrease of 10·3 per cent., that of Scotch emigrants an increase of 1·9 per cent., and that of Irish emigrants an increase of 5·3 per cent.

### *Meteorology.*

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 73–81.

The weather during the quarter was generally mild and dull. The temperature was below its average on a few days in each month; but the aggregate of all such cold periods from the beginning of October to the end of December was only about three weeks. There were 5 days in October, 2 in November, and 13 in December, on which the temperature exceeded its average by more than  $9^{\circ}$ , the excess reaching  $14^{\circ}2$  on 4th December. The fall of rain was somewhat above the average at all stations during each month of the quarter. Fogs were prevalent from 9th to 15th November. On 27th December a strong gale was experienced, which caused much damage and loss of life.

The mean reading of the barometer at Greenwich was 29.748 inches, being .004 of an inch below the average reading in the fourth quarters of 57 years; the mean reading was .045 of an inch below the average in October, and .074 below in November, but was .108 above the average in December. The mean temperature of the air was  $48^{\circ}5$ , which is  $4^{\circ}8$  above the average in the fourth quarters of 127 years; the temperature was above the average in each month of the quarter, the excess being  $4^{\circ}4$  in October,  $3^{\circ}4$  in November, and  $6^{\circ}7$  in December. At 27 other stations of observation the mean temperature of the air during the quarter ranged from  $45^{\circ}4$  at Halifax,  $46^{\circ}0$  at Wolverhampton,  $46^{\circ}4$  at Llangammarch Wells, and  $46^{\circ}5$  at Stonyhurst, to  $50^{\circ}0$  at Eastbourne,  $50^{\circ}5$  at Barnstaple,  $50^{\circ}6$  at Truro, and  $52^{\circ}4$  in Guernsey.

The amount of rain measured during the quarter at the Royal Observatory was 7.78 inches, which is 0.70 of an inch above the average in the fourth quarters of 83 years. The total excess was made up of 0.37 of an inch in October, 0.09 of an inch in November, and 0.24 of an inch in December. At 27 other stations of observation the rainfall during the quarter ranged from 5.54 inches at Cambridge, 5.97 inches at Nottingham, and 6.16 inches at Wolverhampton, to 15.28 inches at Stonyhurst, 15.35 inches in Guernsey, 16.78 inches at Llangammarch Wells, and 17.22 inches at Truro.

The duration of bright sunshine recorded at the Royal Observatory was 185.4 hours, being 22.2 per cent. of the time during which the sun was above the horizon, against a mean proportion of 16.8 per cent. in the twenty-one preceding fourth quarters. The duration of bright sunshine was 7.1 per cent. above the average in October, 58.7 per cent. above in November, and 68.4 per cent. above in December.

Compared with the averages in the ten preceding fourth quarters the death-rate of males showed a decrease of 1·4, and that of females a decrease of 1·5, per 1000 living. Out of equal numbers living, the deaths of males to those of females were as 112 is to 100, against a mean proportion of 110 to 100 in the fourth quarters of the ten preceding years.

**URBAN AND RURAL MORTALITY.**—In those parts of England and Wales that are mainly urban\* in character, with a population estimated at nearly twenty-one and a half millions in the middle of 1898, the death-rate last quarter was 17·5 per 1000 living; whilst in the remaining and chiefly rural areas, with a population of nearly ten millions, the rate was 15·0 per 1000. The urban and the rural rates were 1·8 and 1·3 per 1000 below their respective averages in the ten preceding fourth quarters. Out of equal numbers living the deaths last quarter in the urban areas were to those in the rural areas as 116 is to 100, the mean proportion in the ten preceding fourth quarters having been 118 to 100.

In the thirty-three great towns, of which the aggregate population in the middle of 1898 is estimated at nearly eleven and a quarter millions, the death-rate was 18·1 per 1000 living, or 1·4 in excess of the death-rate in the whole country. The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 153 per 1000, against an average rate of 150 in the ten preceding fourth quarters. In registration counties the lowest proportions were 93 in Dorsetshire, 94 in Hertfordshire, 101 in Oxfordshire and in Wiltshire, and 103 in Westmorland; the highest proportions were 171 in Staffordshire, 173 in South Wales, 176 in Cheshire and in Northumberland, 179 in Durham, and 182 in Lancashire.

Among the several towns the lowest proportions were 102 in Croydon, 134 in Portsmouth, 139 in London, and 143 in Sunderland; the highest were 196 in Brighton, 202 in Gateshead, 203 in Manchester, 208 in Blackburn, and 241 in Preston. Among the sixty-seven other large towns infant mortality averaged 171, ranging from 97 in Devonport, 110 in Willesden, 118 in Bournemouth and in Worcester, and 120 in Lincoln, to 222 in Merthyr Tydfil, 225 in Carlisle, 228 in Stockport, 265 in Ashton-under-Lyne, 268 in Aberdare, and 271 in Longton. Excluding these 100 towns, infant mortality in the remainder of England and Wales was in the proportion of 143 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·6 per 1000 of the estimated population at this group of ages, being 1·0 below the mean rate in the ten preceding fourth quarters. In the thirty-three great towns the mean rate of mortality

---

\* For definition of the terms "urban" and "rural," see Table III. on p. xiii.

at this age-group was 10.1 per 1000 living, ranging from 5.6 in Croydon, 6.9 in Cardiff, 7.6 in Brighton, and 7.8 in Bristol and in Huddersfield, to 12.8 in Salford and in Sunderland, 12.9 in Manchester, 13.8 in Swansea, and 13.9 in Liverpool. In the sixty-seven other large towns the rate averaged 8.6 per 1000, and in the remainder of England and Wales, after excluding these 100 towns, it was 7.5 per 1000.

Among persons aged sixty years and upwards the mortality in England and Wales was at the annual rate of 63.6 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding fourth quarters having been 69.9. In the thirty-three great towns the rate was 69.4 per 1000, ranging from 44.7 in Cardiff, 48.1 in Swansea, 58.6 in Nottingham and in Derby, and 59.1 in Croydon, to 82.4 in Bolton, 86.3 in Newcastle-upon-Tyne, 87.4 in Salford, and 87.6 in Blackburn. In the sixty-seven other large towns the rate at this age-group averaged 64.2 per 1000, and in the remainder of the country it was 60.9 per 1000.

Compared with the mean rates in the ten preceding fourth quarters the mortality of infants under one year of age in England and Wales showed an increase of 2.0 per cent., that of persons between one year and sixty years of age a decrease of 10.4 per cent., and that of persons aged sixty years and upwards a decrease of 9.0 per cent.

**ZYMOTIC DISEASES.**—The 132,453 deaths from all causes, which were registered last quarter, include—

5,024	that were attributed to	diarrhœa,
2,501	“	“ fever,”
2,415	“	diphtheria,
2,024	“	measles,
1,670	“	whooping-cough,
1,024	“	scarlet fever,
and 4	“	small-pox.

Thus, to the above-mentioned zymotic diseases in the aggregate, 14,662 deaths were referred, being in the proportion of 1.85 annually per 1000 of the population, which is 0.09 below the mean proportion in the fourth quarters of the ten preceding years. In proportion to population, the mortality from diphtheria, “fever,” and diarrhœa was above, while that from each of the other diseases was below, the decennial average. In the thirty-three great towns the aggregate mortality from the above-named zymotic diseases was equal to an annual rate of 2.14 per 1000 of the population, and in the sixty-seven other large towns, to a rate of 1.94 per 1000. In the remainder of England and Wales, outside the 100 chief towns, the rate was 1.64 per 1000.

In the course of last quarter *diarrhœa* caused 5,024 deaths, corresponding to an annual rate of 0.63 per 1000, or 0.25 above the average rate of mortality in the fourth quarters of the previous ten years. The death-rate from this disease ranged from 0.12 in Oxfordshire, 0.22 in Herefordshire, 0.24 in Westmorland, and 0.30 in Somersetshire, to 0.90 in Lancashire, 0.97 in Suffolk, 1.09 in the East Riding of Yorkshire, and 1.19 in Durham. Among the thirty-three great towns the diarrhœa rate averaged 0.66 per 1000, the highest rates being 1.26 in Norwich and in Manchester, 1.31 in Hull, 1.39 in Salford, and 1.57 in Burnley. In the sixty-seven other large towns the rate averaged 0.70 per 1000, and among these diarrhœa was most fatal in Ipswich, Dudley, Ashton-under-Lyne, Rotherham, West Hartlepool, and Aberdare. In the rest of England and Wales the diarrhœa death-rate was equal to 0.60 per 1000.

To “fever” 2501 deaths were referred last quarter, giving an annual rate of 0.31 per 1000, which is 0.07 above the average rate in the corresponding quarters of the ten preceding years. No death from “fever” was registered in Herefordshire, in Rutlandshire, or in Westmorland; the highest rates were 0.47 in Norfolk and in Staffordshire, 0.51 in Durham,

0·53 in Nottinghamshire and in the East Riding of Yorkshire, and 0·54 in the West Riding of Yorkshire. In the thirty-three great towns the rate averaged 0·36 per 1000, the highest rates being 0·59 in Preston, 0·69 in Bolton, 0·73 in Salford, 0·83 in Norwich, 0·86 in Sunderland, and 0·96 in Sheffield. In the sixty-seven other large towns the rate averaged 0·34 per 1000, and among these towns the disease showed the highest proportional fatality in Southampton, Great Yarmouth, Longton, Dudley, Grimsby, Stockport, Ashton-under-Lyne, Barnsley, Rhondda, and Aberdare. In the remainder of England and Wales the rate was 0·28 per 1000. Among registration districts and sub-districts outside the chief towns the mortality from "fever" was excessive in Prittlewell, Newton Abbot, Bilston, Oldbury, Rowley Regis, Sedgley, Ilkeston, Carlton, Glossop, Leigh, Stalybridge, Blackpool, Batley, Liversedge, Bishop Auckland, and Dawdon.

*Diphtheria* was the registered cause of death in 2415 instances during the quarter, and accounted for a mortality equal to 0·31 per 1000 living, which is 0·03 above the average rate in the ten preceding fourth quarters. Among registration counties the death-rates ranged from 0·04 in Dorsetshire and in the East Riding of Yorkshire, 0·06 in Durham, 0·08 in Devonshire, and 0·09 in Hertfordshire, to 0·50 in Hampshire, 0·61 in Kent, 0·73 in Bedfordshire, 0·74 in Rutlandshire, and 0·99 in South Wales. In the sixty-seven smaller towns the rate averaged 0·23 per 1000, and among these the highest death-rates from measles were recorded in Eastbourne, Reading, Colchester, Coventry, Chester, and South Shields. In the remainder of England and Wales the measles death-rate was equal to 0·21 per 1000. Among registration districts and sub-districts outside the 100 chief towns in which measles was especially fatal were Fareham, Higham Ferrers, Newton Abbot, Clutton, Leek, Carlton, Prestbury, Aspull, Crompton, and Blyth.

*Whooping-cough* was the registered cause of death in 1670 cases, corresponding to a death-rate of 0·21 annually per 1000 of the population, or 0·10 less than the average in the fourth quarters of the ten preceding years. No death was referred to whooping-cough last quarter in Huntingdonshire or in Rutlandshire, and only one death in Wiltshire; but the death-rate reached 0·32 in Essex, 0·35 in Lincolnshire, 0·36 in Herefordshire, and 0·37 in Cornwall. In the thirty-three great towns the rate averaged 0·22 per 1000. No death from whooping-cough was registered in Burnley, and only one each

in Portsmouth, in Wolverhampton, and in Bolton; the highest rates were 0·43 in Cardiff, 0·54 in Bristol, 0·59 in Swansea, 0·83 in Halifax, and 1·10 in Preston. In the sixty-seven other large towns whooping-cough mortality averaged 0·22 per 1000, and among these towns the disease was especially fatal in Dover, Colchester, Dudley, Chester, St. Helens, Wakefield, and Aberdare. In the remainder of England and Wales the rate was 0·20 per 1000. Among registration districts and sub-districts outside the 100 chief towns whooping-cough showed excessive fatality in Rattlesden, King's Lynn, Totnes, Penzance, Leominster, Handsworth, Barmbrough, and Winlaton.

To *scarlet fever* 1024 deaths were ascribed last quarter, corresponding to an annual rate of 0·13 per 1000, or 0·10 below the average rate in the fourth quarters of the ten preceding years. No death from scarlet fever was recorded in Buckinghamshire, in Oxfordshire, in Huntingdonshire, in Bedfordshire, in Rutlandshire, or in Monmouthshire; the highest rates were 0·22 in Nottinghamshire and in North Wales, 0·23 in Derbyshire, 0·25 in Durham, and 0·26 in Northamptonshire and in Staffordshire. In the thirty-three great towns the scarlet fever rate averaged 0·15 per 1000. No death from scarlet fever was registered in Huddersfield, and only one each in Plymouth, Cardiff, and Preston; the highest rates were 0·28 in Portsmouth, 0·29 in Nottingham, 0·31 in Sunderland, 0·32 in Norwich, and 0·39 in Salford. In the sixty-seven other large towns the rate averaged 0·12 per 1000, and among these was excessive in Cheltenham, Worcester, Wallasey, Bootle, and Warrington. In the remainder of England and Wales the rate was 0·12 per 1000. Among registration districts and sub-districts outside the chief towns scarlet fever showed excessive fatality in Newcastle under Lyme, Wolstanton, Stoke upon Trent, Halesowen, Foleshill, Winterton, and Ruabon.

*Small-pox* was the registered cause of 4 deaths last quarter, against 8 in the previous quarter. Of the 4 deaths, 1 occurred in London, 1 in Surrey, 1 in Lancashire, and 1 in the North Riding of Yorkshire.

**VIOLENT DEATHS.**—The deaths in England and Wales referred to different forms of violence, whether accidental or otherwise, numbered 4787 last quarter, and were equal to an annual rate of 0·60 per 1000 of the population, or 0·01 below the average rate in the ten preceding fourth quarters. The rates in the several counties last quarter ranged from 0·08 in Huntingdonshire, 0·19 in Rutlandshire, 0·27 in Bedfordshire, and 0·30 in Sussex, to 0·77 in Northumberland, 0·79 in Cumberland, 0·87 in Dorsetshire, and 1·31 in Cornwall. In the thirty-three great towns the mean rate was 0·70 per 1000 living, the rates in the several towns ranging from 0·29 in

Croydon, 0·35 in Swansea, and 0·36 in Plymouth, to 0·77 in London, 0·81 in Manchester, 0·82 in Birmingham, 0·99 in Newcastle-upon-Tyne, and 1·06 in Liverpool.

**CERTIFICATION OF CAUSES OF DEATH.**—Of the 132,453 deaths registered in England and Wales last quarter, the causes of 121,384, or 91·7 per cent., were certified by registered medical practitioners, and the causes of 8489, or 6·4 per cent., by coroners after inquest; whilst the causes of the remaining 2580, or 1·9 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding fourth quarters having been 2·6 per cent. No uncertified death was registered in Rutlandshire; in the other counties the proportions per cent. ranged from 0·9 in Surrey, in Sussex, in the East Riding of Yorkshire, and in Monmouthshire, to 3·0 in Shropshire, 3·3 in North Wales, 3·6 in Cornwall, 4·0 in Kent, and 4·3 in Herefordshire. In the thirty-three great towns the mean proportion of uncertified deaths was 1·2 per cent.; but while no uncertified death was registered in Croydon, in Brighton, or in Derby, the proportion rose to 2·4 in West Ham and in Sheffield, 2·6 in Birmingham and in Halifax, 2·8 in Blackburn and in Preston, and 3·5 in Liverpool.

**INQUESTS.**—Inquests were held in England and Wales concerning 8489, or 6·4 per cent., of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·0 per cent. In the thirty-three great towns the proportion of inquest cases was 7·9 per cent., ranging from 3·5 in Preston, 4·4 in Huddersfield, and 4·6 in Swansea and in Burnley, to 8·7 in Wolverhampton, 9·5 in Bolton, 9·8 in London, and 10·7 in Derby.

**DEATHS IN PUBLIC INSTITUTIONS.**—The total deaths registered in England and Wales include 18,580, or 14·0 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 12·1 per cent. In the thirty-three great towns the deaths in public institutions formed 22·0 per cent. of the total deaths, the percentages in the several towns ranging from 5·2 in Swansea, 6·0 in Gateshead, 8·6 in Preston, and 8·7 in Blackburn, to 19·9 in Newcastle-on-Tyne, 21·7 in Brighton, 22·0 in Croydon, 24·2 in Liverpool, and 31·3 in London.

**LONDON.**—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within registration London. The death-rate thus computed was equal to 17·2 annually per 1000 from all causes and to 1·72 from the principal zymotic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 16·7 and 1·68 per 1000 respectively. Table VIII. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many districts of London is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown.

**EDINBURGH, GLASGOW, AND DUBLIN.**—The annual death-rate per 1000, living last quarter was 20·0 in Edinburgh, 19·7 in Glasgow, and 26·8 in Dublin, against 17·2 in London.

**COLONIAL AND FOREIGN CITIES.**—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-seven of the Colonial and Foreign cities, with an aggregate population estimated at nearly twenty-one millions, corresponded to an annual rate of 20·6 per 1000 persons living.

In twenty-four European and American cities the mean rate was 19·0 per 1000, against 18·1 in the thirty-three great English towns. In Paris the rate was 17·9, in Berlin it was 16·5, in Vienna it was 17·7, and in New York it was 18·1, against 17·2 in London. Among the other cities the death-rates ranged from 16·0 in Hamburg, 16·4 in Stockholm, and 16·6 in Dresden, to 23·6 in Munich, 23·7 in St. Petersburg, 23·9 in Prague, 25·5 in Trieste, and 27·3 in Moscow. In the Indian cities the rates were 26·4 in Calcutta, 43·9 in Bombay, and 46·3 in Madras. *Small-pox* caused 71 deaths in Moscow, 10 in St. Petersburg, and 7 in Bombay. In proportion to population, *measles* was most fatal in Amsterdam, The Hague, Prague, and Buda-Pesth; *scarlet fever* in St. Petersburg, Moscow, Prague, Buda-Pesth, and Trieste; *diphtheria* in Stockholm, St. Petersburg, Moscow, Berlin, Prague, Trieste, Venice, and Philadelphia; *whooping cough* in the Dutch cities, in Copenhagen, St. Petersburg, and in Hamburg; "*fever*" in the Indian cities, in St. Petersburg, in Rome, and in Philadelphia; *diarrhæal diseases* in the Indian cities, in Brussels, St. Petersburg, Moscow, Breslau, Munich, and Venice.

### The Year 1898.

According to the quarterly returns furnished by local registrars 922,873 births and 552,040 deaths were registered in England and Wales during the year 1898. The natural increase of population, by excess of births over deaths, was therefore 370,833, the average annual increase in the preceding five years having been 371,530.

The returns issued by the Board of Trade show that 205,073 emigrants embarked during the year, from the various ports in the United Kingdom at which emigration officers are stationed, for places beyond Europe. Distributing proportionally 3,972 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 143,955, of whom 93,284 were English, 16,036 Scotch, and 34,635 Irish, whilst 61,118 others were of foreign origin. The emigrants from each division of the United Kingdom showed a decrease from the numbers in the previous year, the decrease in the English emigrants being 4·5 per cent., in the Scotch emigrants 2·7 per cent., and in the Irish emigrants 3·5 per cent.

The birth-rate in England and Wales in 1898 was 29·4 per 1000 of the population, which is lower than that in any other year on record; compared with the average in the ten years 1888–97, the birth-rate in 1898 shows a decrease of 1·1 per 1000.

The death-rate in 1898 was 17·6 per 1000, which is lower than the rate in any previous year, excepting 1894, 1896, and 1897; compared with the average in the ten years 1888–97 the death-rate in 1898 shows a decrease of 0·8 per 1000.

The 552,040 deaths registered in 1898 included 148,249 of infants under one year of age, 247,263 of persons aged between one year and 60 years, and 156,528 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 161, which was 12 per 1000 above the mean proportion in the ten years 1888-97. The death-rate among persons aged between one year and 60 years was 8·8 per 1000, and that among persons aged 60 years and upwards was 67·4 per 1000, of the estimated populations at these respective groups of ages.

The total deaths registered included 30,077 from diarrhoea, 12,922 from measles, 9,723 from whooping-cough, 7500 from diphtheria, 5733 from "fever," 3505 from scarlet fever, and 254 from small-pox. Thus 69,714 deaths were attributed to these zymotic diseases, corresponding to a rate of 2·22 per 1000 living, against 2·21 and 2·17 respectively in the two preceding years.

To different forms of violence 19,011 deaths were referred, being in the proportion of 0·61 per 1000 of the population, against 0·64 and 0·66 in the two preceding years.

The 552,040 deaths included 34,023 cases, or 6·2 per cent., in which inquests were held; and 10,334 cases, or 1·9 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1898, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Sixty-First Annual Report, which is now in course of preparation.

The Registration Districts, 636 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties. The numerical arrangement 1a to 631 was adopted on 1st July 1891.

<sup>a</sup> See page 2, note <sup>b</sup>.

<sup>b</sup> For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in the Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 31st December 1898.
